DETAILED ACTION

Response to Amendment

1. The amendment received on 1/03/2006 has been reviewed and considered with the following results:

As to the objection to the oath or declaration, Applicant's remarks/arguments have been carefully reviewed and found persuasive, as such; the objection has been withdrawn.

As to the objection to the specification, Applicant's remarks/arguments have been carefully reviewed and found persuasive, as such; the objection has been withdrawn.

As to the objection to the abstract, Applicant's remarks/arguments have been carefully reviewed and found persuasive, as such; the objection has been withdrawn. The amendment abstract has been accepted.

As to the objection to the drawings, Applicant's revision of the drawings has overcome the objection, as such; the objection has been withdrawn.

The prior art rejections to the claims 1-7 made in the previous Office Action mailed on 10/19/2005 are now withdrawn in view of Applicant's amendments.

Applicant's amendments and arguments have been considered but are moot in view of a new action on the merits appears below.

Election/Restrictions

- 2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-5, drawn to a high-pressure discharge lamp, classified in class313, subclass 491.

Application/Control Number: 10/500,684 Page 3

Art Unit: 2816

II. Claims 6-8, drawn to a method of manufacturing an electrode, classified in class 313, subclass 326.

- 3. The inventions are distinct, each from the other because of the following reasons:

 Inventions group I and group II are related as process of making and product
 made. The inventions are distinct if either or both of the following can be shown: (1) that
 the process as claimed can be used to make other and materially different product or (2)
 that the product as claimed can be made by another and materially different process
 (MPEP § 806.05(f)). In the instant case the product as claimed can be practiced by using
 different process of making the device such as a high-pressure discharge lamp.
- 4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
- 5. During a telephone conversation with Mr. Frank J. Keegan on 01/25/2006 a provisional election was made without traverse to prosecute the invention of group I, claims 1-5. Affirmation of this election must be made by applicant in replying to this Office action. Claims 6-8 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Application/Control Number: 10/500,684

Art Unit: 2816

7. Claims 1, 2, 4, and 5 are rejected under 35 U.S.C. 102(e) as being anticipated by Nakano et al. (US 6,882,109).

With regard to claim 1, Nakano et al. discloses in Figs. 3-17 a high-pressure discharge lamp provided with a discharge vessel (11) having a wall of a ceramic material, and provided with at least one electrode feed through comprising a cermet rod (24), which is secured, at a first end, to a first end of an electrode pin (21) by means of a welded joint, which electrode pin is substantially composed of tungsten and extends in line with the cermet rod, wherein the electrode pin comprises a solidified tungsten melt at its first end in the vicinity of the interface between electrode pin and cermet rod.

With regard to claim 2, the reference also meets the recited limitations in the claim (see column 10 lines 9 - 23).

With regard to claim 4, the cermet rod is connected at a second end to a niobium pin (27).

With regard to claim 5, the electrode pin carries a tungsten electrode spiral (20) at a second end.

Allowable Subject Matter

8. Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art of record fails to disclose or fairly suggest a high-pressure discharge lamp (as shown in Figs. 1-2) provided with a discharge vessel having a wall of a ceramic material, and provided with at least one electrode feed through (2, 3), as recited in claim

Art Unit: 2816

3, having specific structural limitations such as the electrode pin exhibits, at its first end, a tungsten melt (35) in three locations on its circumference, which tungsten melts are arranged at an angle of 120° with respect to each other and are at the same distance from the interface (34), and being configured in combination with the rest of the limitations of the base claims and any intervening claims.

Conclusion

- 9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kariya et al. (US 4,808,881) is cited as of interest because it discloses a ceramic envelope device for high-pressure discharge lamp.
- 10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hai L. Nguyen whose telephone number is 571-272-1747. The examiner can normally be reached on Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Timothy Callahan can be reached on 571-272-1740. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
